

# Biome in a Bag

See how well your students know their biomes with this fun science game.

## **Material required:**

- 6 paper bags
- Chart paper
- Scissors
- Marker

## **Procedure:**

1. Label the paper bags with the names of the six major biomes. You can include more types if your students are familiar with them.
2. Cut out index cards from the chart paper and write down the names of animals found in each of the different biomes.
3. You can also write down fun facts and characteristics of each of the biomes.
4. Gather all the cards together and give them to your students.
5. Challenge them to sort the cards correctly by putting them into the correct bags.
6. You can also play this game by dividing the class into teams and giving each team a set of bags and cards to sort. The first to finish wins the game.
